

Create professional photo album websites with jAlbum

The jAlbum desktop software is targeted toward professional and amateur photographers who want an easy way of presenting their work on the web. Not only can you create beautiful photo album websites in just a few clicks, jAlbum offers endless ways for customization to truly get that unique touch with a professional look and feel.

“ While competitors only offer a few visual variants to the same album functionality, jAlbum offers unparalleled freedom in visual expression, technology choice and functionality. – David Ekholm, Founder and CEO

jAlbum awards and reviews:

Publish on any website

With the built-in FTP uploader, jAlbum lets you publish your albums on your own hosting and domain. jAlbum does not claim any rights to your images, and never will!

Sell your images

jAlbum's commercial features make it easy to sell your images as prints or by digital download. Available integrations include Google checkout, Paypal and Fotomoto.

Work faster

jAlbum is optimized to handle huge amounts of images no matter how you've organized them on your hard-drive. Automzied downscaling, water-marking, and other features means that you can update your albums within minutes!

Additional features

- 100´s of album skins (themes) that you can use as they are or customize to your liking
- Image editing, histogram and neat filters that you can apply to an entire album
- Intuitive drag-and-drop user interface
- The software comes in 32 languages and has a built-in translator tool
- Works on Windows, Mac OSX and Linux
- Create private albums or share on social media
- Enable automatic watermarking
