

jAlbum 12

brings cool new features

“ We’re excited to tell you about the improvements that have been added to the long-awaited v12 release of our desktop software. It’s been a year since the last major release, where we added support for 164 video formats. This version focuses on improving the user experience.

David Ekholm, Founder and CEO

Opening an album over a network drive

Resuming an interrupted build

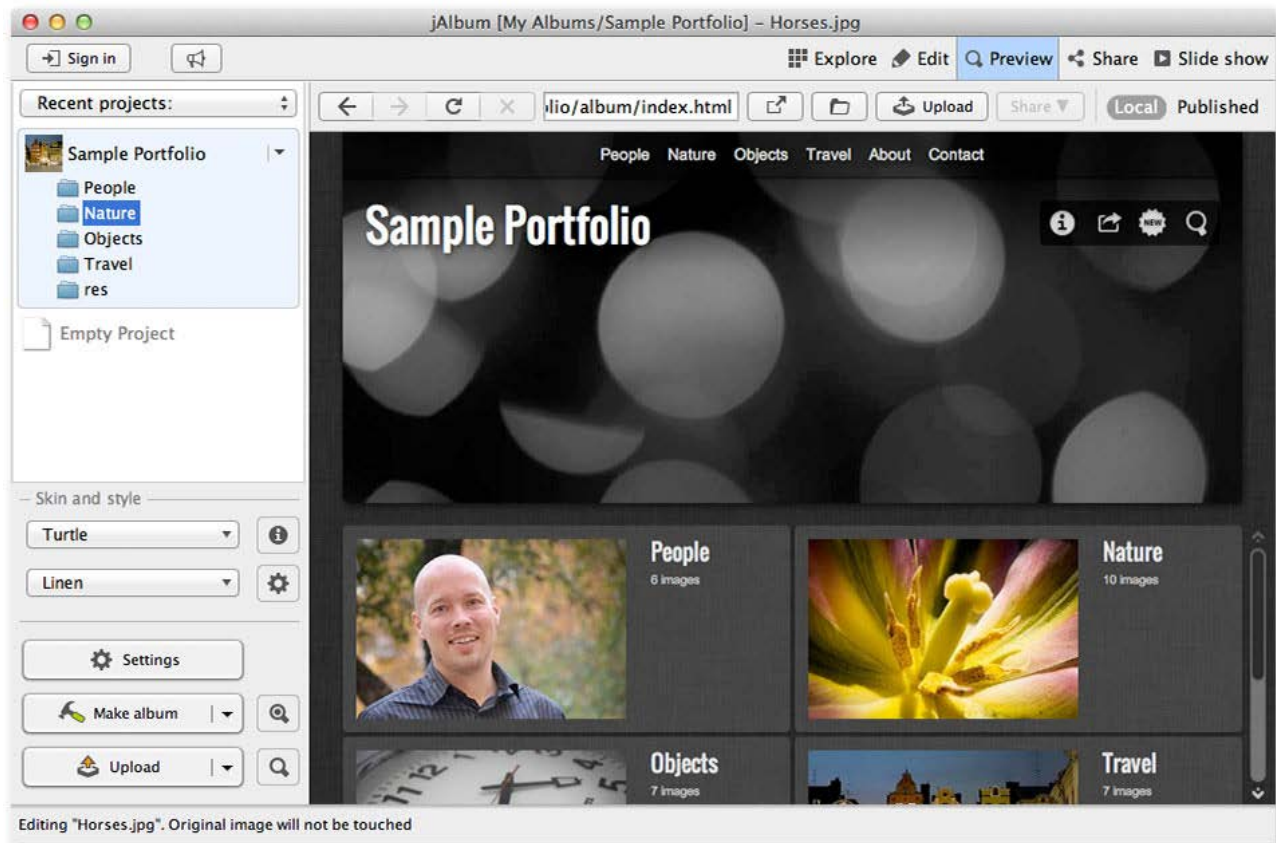

Faster

jAlbum 12 is significantly faster in dealing with images loaded over network drives. A typical project that took 15 seconds to open over a network drive now opens in 3 seconds.

Significant improvement during resumed build of previously interrupted albums. No unnecessary re-processing of images and videos anymore – jAlbum now remembers their build settings.

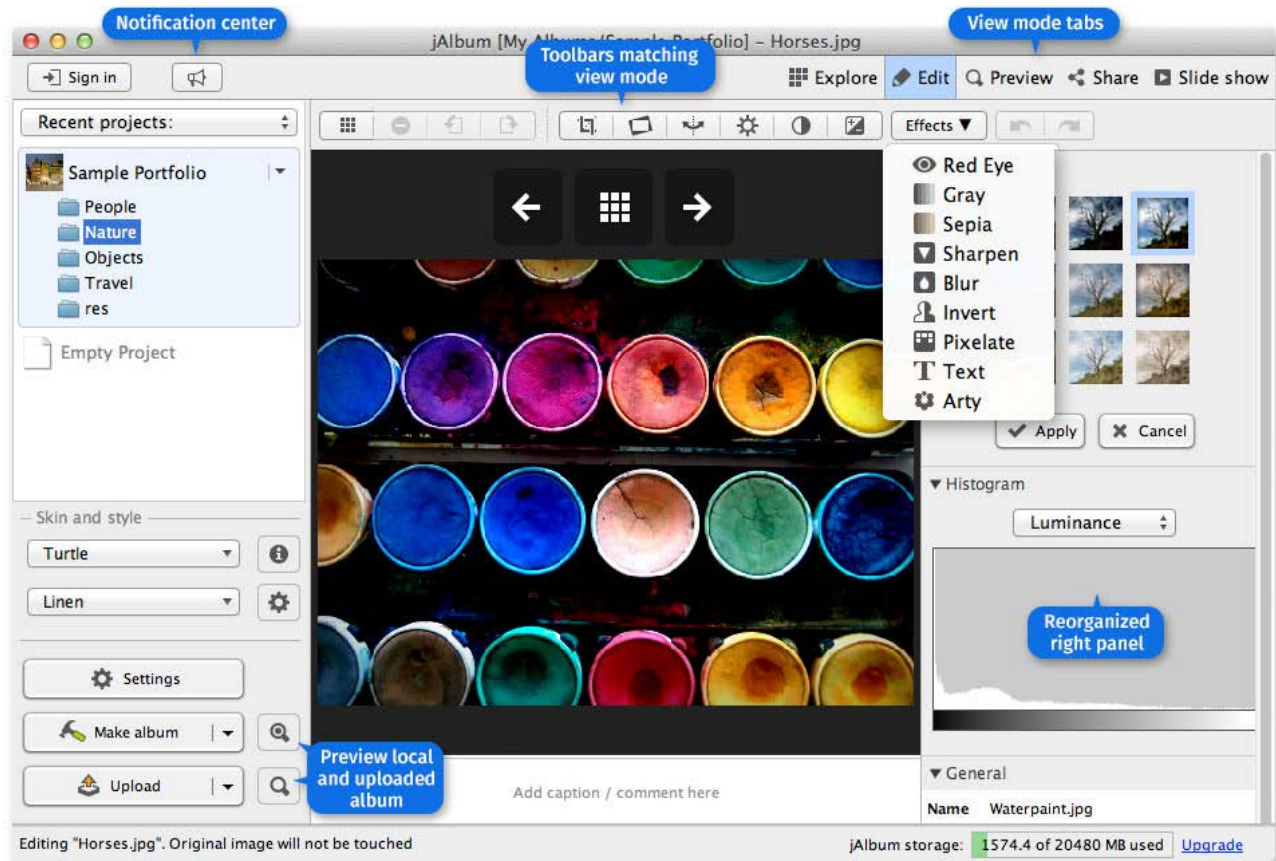

Integrated web browser

Web browser with classical browser functions for previewing a local album and viewing the final published album. Updates the local album in the background and reloads the display as you play with skin- and style changes.

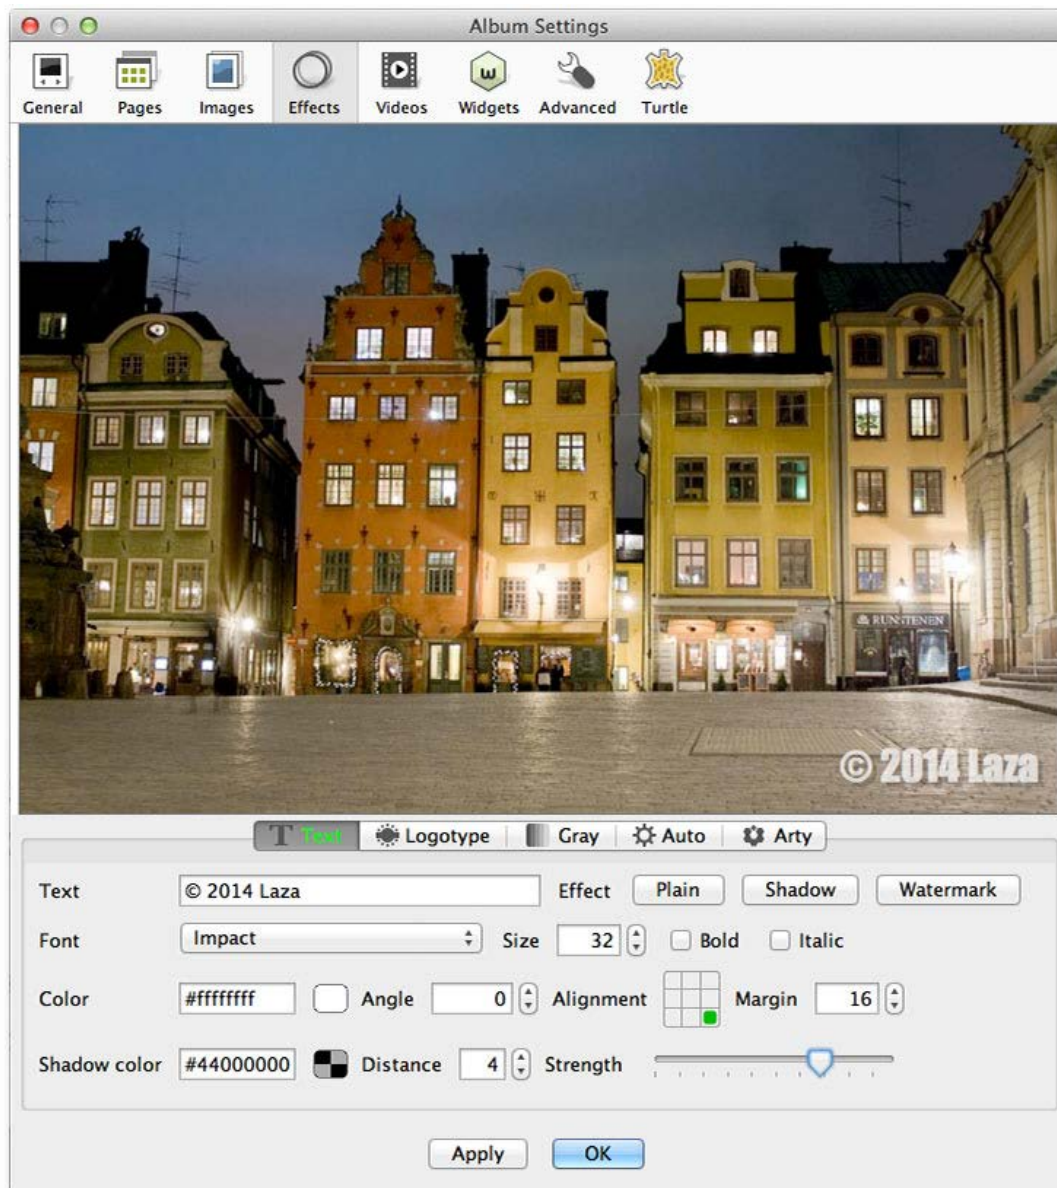

New User Interface

The new user interface is designed to help you during the album work, with toned down cleaner icons that change with view modes, a new notification center, better organized right panel in edit mode, and separate preview buttons for the local and the uploaded albums.

Effects panel

New "Effects" settings tab allowing easy and detailed control of album-wide image effects like watermarks/texts, logos, grayscale, auto-correct and artistic filters via an easy to use interface. (Effects applies to all images unlike their "Image tools" counterparts).

jAlbum awards and reviews:

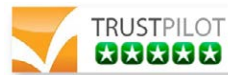

The European Business Awards engaged an amazing 17,000 companies this year!

jAlbum National Champion in the European Business Awards 2013/14
